Autodesk® Design Suite and Revit® Architecture users can now use the Autodesk® Video Editor to create high-quality videos in just a few steps. New features in this release include support for augmented reality (AR) content, support for playback with more 360 degree camera setups, support for YouTube 360 Viewer, improvements to video management, and other performance enhancements. The ability to create AR content is based on the real-world features in Autodesk's Structure-From-Motion (SFM) feature. This functionality allows users to generate the 3D geometry of structures through camera motion. The video editor includes a virtual viewport that helps you create and manipulate AR content and scenes. You can use real world views from inside your Revit® model to make sure your videos look authentic. You can also include images and videos to create an immersive AR experience for your viewers. Additionally, you can quickly adjust AR images in the editor through a timeline editing feature. When you create video files, you can use the Autodesk 360 Viewer to play videos from Revit. For example, you can open video files in the Autodesk 360 Viewer to view your videos in a virtual 3D viewer. Autodesk 360 Viewer also lets you easily share your videos with others. For example, you can easily upload videos you create from Revit directly to YouTube. The new video management feature enables you to organize your videos in the Autodesk 360 Video Editor and transfer them from a local drive to cloud storage services. You can also link your video assets to your Revit and 3ds Max project files and other assets. This is a free update.
